SYDNEY Pressed Metal

ACOUSTIC PRESSED METAL CEILINGS

Decorative character. Acoustic comfort.

AUSTRALIA-WIDE SUPPLY AND INSTALLATION

Pressed-metal ceiling solutions for hospitality, commercial and architectural interiors.

Decorative interior reference. Panel design specified separately.

Designed for atmosphere.

Decorative detail and effective acoustic treatment, considered together.

Sydney Pressed Metal provides decorative acoustic pressed-metal ceiling solutions, with Australia-wide supply and installation.

Perforated panels allow sound to reach acoustic backing, where sound energy is absorbed. The complete system reduces reverberation while retaining the depth and character of a decorative metal ceiling.

SYDNEY PRESSED METAL PROJECT

Terminus Hotel, Pyrmont

We worked with the project team on an acoustic absorption requirement, incorporating the Flinders design pressed into perforated steel within the heritage interior.

Two ways to build the ceiling.

Select the format around the design, support structure, service access and acoustic brief.

FIXED CEILING

Nail-Up Acoustic Panels

Fixed panels are secured to a suitable support structure, with acoustic backing behind the perforated face. Support, cavity and fixing details are coordinated for the selected system.

Typical application
Permanent decorative ceilings in restaurants, hotels and heritage-style interiors.

SUSPENDED GRID

Drop-In Acoustic Panels

Panels sit within a compatible suspended ceiling grid, with acoustic backing above. Grid compatibility, panel retention and access are confirmed during specification.

Typical application
Offices, commercial fitouts and hospitality spaces where access to services matters.

Copper-toned bar interior. Decorative reference.

Distressed ceiling. Decorative reference.

A considered palette.

44 available finishes. Three distinctive families. One coordinated ceiling design.

ESSENTIALS / 7 STANDARD COLOURS

Porcelain Gloss

Porcelain Silk

Chalk White

Warm Linen

Sandstone

Soft Parchment

Harbour Mist

SIGNATURE METALS / 14 METALLIC & DARK FINISHES

Harbour Silver

Polished Alloy

Aged Pewter

Champagne Gold

Sovereign Gold

Copper Glow

Ember Copper

Iron Smoke

Burnished Earth

Deep Umber

Midnight Bronze

Velvet Black

Bronze Lustre

Textured Onyx

All finishes are available through Sydney Pressed Metal. Compatible finish and panel combinations depend on the selected acoustic system. Samples illustrate surface appearance; panel designs are specified separately.

The Artisan Collection.

23 layered, aged and decorative finishes with texture, colour and depth.

Kiln Copper

Estate Copper

Blush Pearl

Nocturne Silver

Bronze Halo

Garnet Haze

Charcoal Wash

Storm Patina

Aged Truffle

Champagne Pearl

Finish names identify our colour selections, not the metal substrate or panel pattern. Screen and print reproduction vary; approve a physical sample before ordering.

Sound absorption. Architectural character.

SELECTED TESTED SYSTEMS

Up to NRC 0.85

Selected acoustic pressed-metal ceiling systems can achieve sound absorption ratings of up to NRC 0.85 when used with the specified acoustic backing and tested installation configuration.

Tested assembly

NRC describes laboratory-tested sound absorption for a complete assembly. Panel, perforations, backing and mounting are specified together.

The room outcome

Coverage, room geometry and other finishes affect the result within a space; they do not change the tested assembly's laboratory NRC.

Designed around your project

We coordinate the acoustic brief with panel selection, finish, support, lighting and services. Fire requirements, access and fixing details are addressed for the proposed system. NRC is a sound-absorption rating, not a soundproofing rating.

Light decorative ceiling reference. Acoustic and panel specifications are selected for each project.

BRING YOUR PROJECT TO US

Let's shape a ceiling around your space.

Australia-wide supply and installation.

From our Sydney base, we coordinate supply and installation across Australia. Scope, timing and logistics are confirmed during the quotation process.

START WITH YOUR BRIEF

Send your project location, ceiling area and height, plans or photographs, preferred finishes, acoustic targets and required supply or installation scope.
